

SUPPORTED CASH REGISTERS

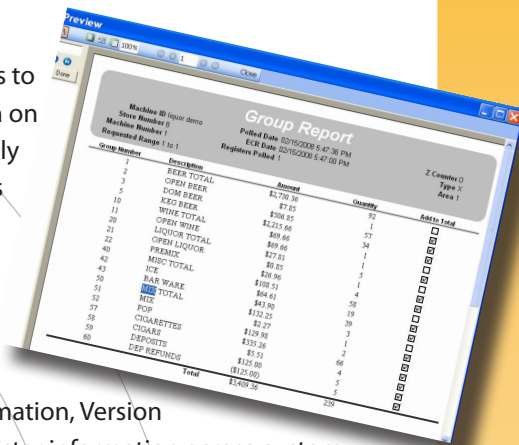

Every business is unique. Flexibility and versatility are essential in today's business world in order to compete and to grow. As your business grows, PC/Poll Version 7 Polling can grow right along with you. Version 7 is one of the few Polling software tools that supports multiple register types from within 1 software module. Only you and your cash register dealer can decide which register is right for your business, but rest assured that, as your business grows and you add on additional registers or different register models, Version 7 Polling can be expanded to grow with you.

Version 7 Polling connects to all the registers listed below. Version 7 allows users to save, send and maintain key register program data. Besides allowing for editing basic register functions, Version 7 takes the features of the cash register to

the next level by incorporating the power of the PC. Quickly multi-select items and mass update. Easily select a group of items to place on sale for a pre-determined date range. The software will keep track of the sale price and the regular price.

Polling also allows users to poll register report data on demand or automatically on pre-scheduled times and dates. In addition to the standard register reporting options, such as Item Sales, Financial Data, Hourly Sales and Cashier information, Version 7 can also combine register information across custom defined date ranges and across multiple register types to allow you to see sales numbers in ways that are not possible at a register level. If you still need more options, interface the Polling to one of the many add-on modules such as AIMsi inventory, QB Interface or DenView500, or configure the software to automatically export the data for the unique solution your business requires.
